

Mātrex®

Innovative Solutions, Consistent Performance, And Impeccable Service

Elastic Webbing Suspensions - the standard for high-end household and institutional furniture. The Matrex line of strip webbings provides an extensive group of strip rubber webbings, many of which have been utilized by the industry for over twenty years.

Electra™ - the latest innovation in high quality, all purpose webbing, designed to meet the most demanding specifications and environments. Manufactured within exacting parameters with high quality polyester and polypropylene yarns and elastomeric monofilaments.

Unitrex™ - Matrex uses precise digital technology in producing MDF or plywood boards. This process ensures that our customers get the same consistent shape, custom fit, and aesthetic quality that only a CNC router can provide.

WebRider™ - provides the "best of both worlds" - webbing and springs. Matrex developed this product in answer to customer requests for a suspension system that has the durability and comfort of webbing, while providing the high crown of spring seating systems. The WebRider concept consists of multiple springs pre-loaded within anelastic assemblage. The system features simple installation techniques, seat crown, and plush, deep ride comfort seating.

Decking - advanced construction fabrics - for decking and intermediate support applications, including stretch and rigid tri-laminates.

Connectors - depending on your application, hide-away tooth connectors, as well as recessed pin connectors are available for sectionals and work station.

Legs - available in a variety of sizes and shapes, these legs are constructed of highly durable plastic. To prevent sliding on smooth surfaces such as hardwood or linoleum flooring, "non-skid" rubbersoles are optional. Scratch resistant chrome finishes are also available.

WCU™ - the WebRider Compact Unit provides you with an easily installed seating unit that features the coil/webbing WebRider construction assembled within a metal wire frame. This unit provides comfortable, durable seating, ease in installation, and meets the BIFMA test seating requirements.

SinuWeb™ - this Sinuous/Webbing combination eliminates clips and handling operation making installation easier. Frame stress is reduced and noise eliminated improving long term performance.

Synet™ - resilient fabrics for back construction. One material yields 100% superior coverage. Easy installation means substantial labor savings. Soft, comfortable and lively feel allows you to reduce foam and fiber.

Sytex™ - seating support systems based on the unique elastomeric properties of a high strength polyester monofilament. Sytex™ can be easily adjusted to obtain a firm seat or a deep, plush ride, and surpasses all government and business technical specifications, including FNE-83-258-B and BIFMA.

Collage™ - an elastomeric fabric with evolving dynamics created to function as a seating suspension. From the highly engineered to the most simple designs Collage™ goes beyond the science of suspension textiles adding artfulness to the equation.
