

Omega Glider

4181/4183 Glider

- **Swivel rocker/recline motion**
- **Standard ottoman and mid-ottoman**

Performance & Engineering

- **Wide heavy gauge links** designed for safety and appearance without pinch points.
- Built-in articulating elevated mid-ottoman allows use of wider and higher mid-ottoman for elimination of entrapment areas and for leg support.
- **Geometrically balanced** to allow the occupant's weight to balance operation instead of springs.
- Handle/lever unlocks the mechanism, occupant's weight opens the chair.
- Square drive tube connects to and controls both left and right sides.
- Flatter links supporting chair for improved weight capacity (250 lb occupant weight).
- Mechanism base width is closer to seat width while maintaining sufficient clearance between links to eliminate possibility of interference.
- Seat height can be maintained in same frame as Zero Wall and Standard Rocker.
- Greased full race ball bearing glide joints for effortless glide motion that does not deteriorate over the life of the mechanism.
- Single part supporting glide links - others use three separate parts riveted together.
- Delrin and bronze rivet bushings to eliminate any steel-to-steel contact and reduce wear.
- Nylon stop pin bushings to reduce noise.

Styling & Design

- **All Omega and Delta series mechanisms are interchangeable** in the same frame if the frame is constructed per the Rocker frame prints.

Long Life™ mechanism has been field tested and proven by L&P testing facility.
