

Omega Wallhugger™ Zero Wall

4302/4304 Wallhugger™

- Wallhugger™ recline motion.
- New elevated ottoman with standard mid-ottoman.

4311/4313 Wallhugger™

- Wallhugger™ recline motion
- Standard ottoman length - elevated mid-ottoman

Performance & Engineering

- **Wide heavy gauge links** designed for safety and appearance without pinch points.
- Built-in articulating elevated mid-ottoman allows use of wider and higher mid-ottoman for elimination of entrapment areas and for leg support.
- **Geometrically balanced** to allow the occupant's weight to balance operation instead of springs.
- Handle/lever unlocks the mechanism, occupant's weight opens the chair.
- Square drive tube connects to and controls both left and right sides.
- Flatter links supporting chair for improved weight capacity (250 lb occupant weight).
- Mechanism base width is closer to seat width while maintaining sufficient clearance between links to eliminate possibility of interference.

4314/4324 Wallhugger™

- Wallhugger™ recline motion.
- Extended ottoman length - standard mid ottoman.

4126/5326 Wallhugger™

- Wallhugger™ recline motion
- New elevated and extended ottoman with standard mid ottoman.

- Heavy flanges on links instead of tube eliminates problems with flexing and breaking of tube end at bend. Flange is on heavy gauge link instead of the lighter gauge tube with can flex and break.
- Large diameter tubes instead of formed straps maximizes torsional strength unlike non-tubular cross members which have no significant torsional strength.
- Delrin and bronze rivet bushings to eliminate any steel-to-steel contact and reduce wear.
- Nylon stop pin bushings to reduce noise.

Styling & Design

- **All Omega and Delta series mechanisms are interchangeable** in the same frame if the frame is constructed per the Rocker frame prints.

Long Life™ mechanism has been field tested and proven by L&P testing facility.
